

Intuitive access control software and management

Openpath's scalable access control management software comes equipped with a diverse feature set and easy-to-use dashboard that enables fully remote management. And with every automatic update, it just keeps getting better.

Developed differently

Openpath's cloud software is built to increase efficiency, reduce costs, and make managing your system easier than ever.

- **Fully remote management.** Access Openpath from any web-enabled device to easily administer credentials, revoke access, and customize entries, with all sites, users, and locations managed from a single interface.
- **Secure and reliable.** IT-approved software meets network compliance requirements and automatically updates against threats and vulnerabilities without interrupting your workflow, all complete with end-to-end encryption.
- **Unprecedented control.** Customize user schedules, permissions, and default entry states for specific credential types. Save time and money with software that easily scales up or back as often as you need.
- **Real-time visibility.** Maintain a system of record with detailed activity logs, on-demand video, and custom alerts for access events as they occur.
- **24/7 support.** Monitor hardware statuses and perform remote diagnostic actions anytime, anywhere with the ability to troubleshoot in the cloud.

Combined access and video monitoring

Get a more comprehensive view of what's happening across all your spaces with Openpath's unified video and access solutions.

- Conveniently monitor video of every access event on your mobile device or in the Control Center
- Frictionless integrations with leading video management and analytics providers, including Ava, Avigilon, Cisco Meraki, Camio, Rhombus Systems, and Milestone
- See live and on-demand video of every access event with the Openpath Video Reader Pro
- Combine touchless access, two-way audio, and mobile video calling in a single, voice-activated device at the door with the Openpath Video Intercom Reader Pro
- Easily integrate with existing video security cameras and infrastructure

Designed to scale with ease

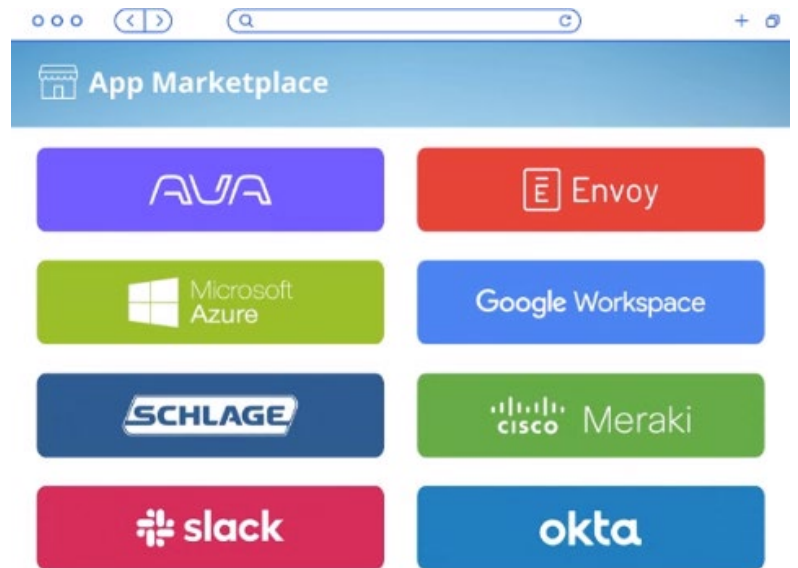

Openpath's enterprise-grade cloud architecture increases the adaptability and reliability of your security for unparalleled flexibility compared to legacy server systems:

- Support for unlimited sites, doors, users, roles and groups
- Streamline multi-site management with granular permissions and Custom Fields
- Automatically sync users across sites and locations using your preferred identity provider
- Customize and activate emergency lockdown plans remotely from any device
- Merge physical and cyber security strategies for a holistic, future-proof system

Limitless integration through App Marketplace

Create a complete, collaborative system with Openpath's App Marketplace and cloud-based software, with support for unlimited apps and automation.

- Seamlessly integrate your access control to the software and tools you already use, with 45+ apps from leading technology providers and companies
- Customize and scale your system with open API architecture and mobile SDK
- Webhooks make it easy to connect with security, video, and productivity software
- Reduce costs with software that automatically installs the latest features, and eliminates the need for a dedicated administrator
- Automate processes across IoT-connected devices and sites

Mobile-optimized custom dashboards

Personalize the Control Center for real-time visibility and control of what's most relevant at the user, site, and org level – from anywhere.

- Improve ROI and response time with faster access to key insights
- Gain a broader perspective of security across your entire organization
- Toggle between all org dashboards and set default dashboards at the user level
- Display Live Event Feed, Entry Controls, Identity Verification, Lockdown Plans, Occupancy, Hardware Count, Statistics, and Activity Feed widgets.
- Added functionality will continue to roll out automatically including live video feed, maps, and alarm widgets.

Scalable software packages

Every Openpath software option comes equipped with robust security features on a fully remote, cloud-based management platform. All packages are designed to scale up or back as needed, and provide best-in-class capabilities for access control systems.

Select the software package that's right for you
